

# DMD CANTILEVER RACKING

Cantilever racks can store any type of load but are ideal for storing long, bulky, or oddly-shaped loads. Cantilever puts hard-to-store materials into an orderly storage system where they are more accessible.

Without columns in the way, cantilever racks are fast to load and unload. They are the perfect solution for horizontally storing heavy long packs such as lengths of steel, timber and plaster boards.

- ✓ Ideal for storing long materials
- ✓ Adjustable arms
- ✓ Capacities from 100kg to 1000kg per arm
- ✓ Available double or single sided
- ✓ Can be customised to suit any application
